

Second hand machines

Due to the relationships we have with our customers if they have a machine to sell or are looking for a used machine we will endeavour to find a suitable machine to their specification and budget.

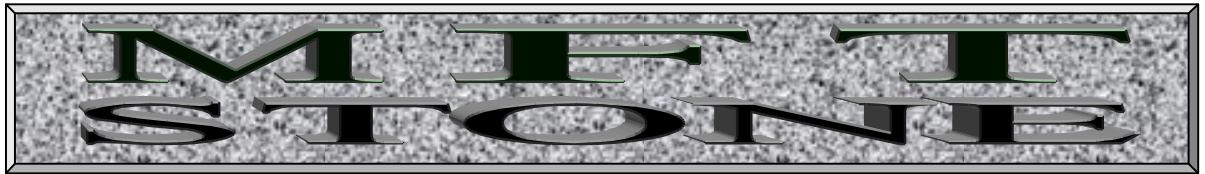

We can also employ our service engineers to commission and install many types of machines.

With our Engineering background modifications, improvements and special machines can also be designed and supplied by MFT Stone.

Finance

Should you require finance for your new or used machine we can get an advisor to discuss the best options available to you and supply you with the finance package that suits you best. We have made a number of contacts in this field so please allow us to give you some details.

For over 30 years this company has provided expertise in the provision of electrical & mechanical engineering support services including the relocation, installation, maintenance and general care of manufacturing assets, as well as facilities management.

Specialist services are regularly employed to assist customers to resolve problems of Health and Safety relating to manufacturing, Work Equipment Preventative Maintenance Inspections, PUWER Assessments & Electrical Testing Services, to further enable their clients to comply with their statutory obligations.

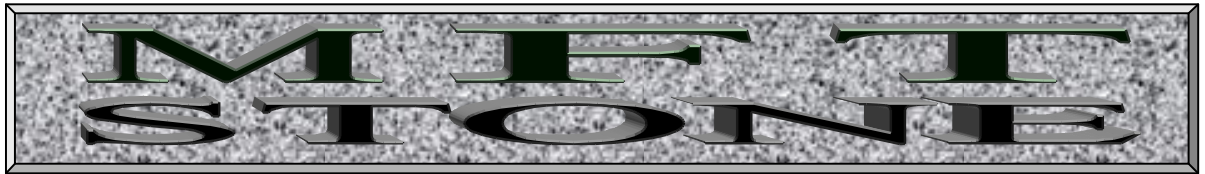

The mechanical service engineers are all fully trained and competent in mechanical / pneumatic and hydraulic engineering.

A Heavy Lifting Service provides solutions to the problem of movement, ranging from complete relocation to the resiting of a single item of equipment.

A Machine Tool Service Division with expertise in the field to computerised control systems further complements the range of services by providing skilled staff dedicated to the care of both CNC and conventional machinery.

This company prides itself on customer care and has developed a reputation for offering a highly professional and dedicated team, determined to exceed its customer's expectations.

Health and Safety

As Health and Safety requirements in the industry become more complex and authorities start to clamp down MFT Stone have teamed up with an established Health and Safety advisor who specializes in the Stone Industry to offer the following help and assistance to our customers.

If you employ 5 or more people you must have a written Health & Safety Policy Document and conduct written risk assessments for all your machinery and hazardous processes.

Risk assessments are an absolute requirement in accordance with the Management of Health & Safety at Work Regulations 1999 and form the foundations upon which your health and safety system must be based.

The health and safety policy document details what you do and how you do it, whilst your risk assessments detail how you identify the hazards and then control the risks in what you do and how you do it.

Together the two document files will form the basis of your safety management system within your company.

Once in place, an accident could only occur if work is not being done in accordance with the risk assessments and the health and safety policy document, or the accident was not reasonably foreseen.

Our advisor will write the required documents around your company and it's practices. Generic documents will not always ensure you are adequately covered.
